

## Weep Vent

### Description

An unobtrusive vent which sits between two bricks to ventilate cavities and provide drainage for lintels and cavity trays. Weep Vents feature an angled grill which aids in the prevention of insect entry and the ingress of wind driven rain.

### Installation

The Weep Vent should be positioned between bricks and secured with mortar. NHBC requirements stipulate spacing at 450mm centres with a minimum of 2 above all windows and doors.
